Green Line: Represents the breed average (50th percentile)
Red Line: Represents the current % rank as determined by the epd value
Yellow Band: Range of potential % rank based on possible change expected based on current accuracy. As more data is received and incorporated into the NCE, the band will shrink. The red band SHOULD reposition somewhere inside the current band.

Why the change from the old chart? The new chart simply presents more data and attempts to visually represent the genetic potential of the animal. Whereas the old chart showed the current within-breed percentile ranking of every trait, the new chart adds to that by incorporating the accuracy and utilizing the derived 'possible change' values. The resulting graph should help breeders answer the age-old question 'why did my bulls epd change so much?'.
